SUMMARY

Enthusiastic junior at Arizona State University, majoring in Computer Systems Engineering, bilingual in Vietnamese and English, with a passion for community service and developing strong technical skills in computer systems and software.

EDUCATION

B.S. Computer Systems Engineering Expected May 2028
Arizona State University, Tempe, AZ 4.00 GPA
Ira A. Fulton Schools of Engineering Dean's list

TECHNICAL SKILLS

Programming Languages: Python, C++, C, Java, TypeScript, Scheme, Prolog
Robotics / Embedded: ROS2, Nav2 (navigation stack), GPIO/PWM control, path planning algorithms, Linux (Ubuntu)
Full-Stack Development: React, Next.js, HTML, CSS, Tailwind CSS, MongoDB

WORK EXPERIENCE

Arizona State University, Tempe, AZ: Community Assistant at Tooker House 08/2025 - Present

- Fostered student engagement by building relationships with 60+ residents, facilitating community events, and promoting the Sun Devil Community of Care to create a supportive and inclusive residential environment.
- Ensured safety and crisis response by serving in after-hours duty rotations, addressing student emergencies, and collaborating with Residential Life professional staff to maintain security and wellbeing in the community.

RELEVANT PROJECTS

Sun Devil Rocketry: Website & Flight Software GUI – Next.js. React, Vite, TypeScript 09/2026 – Present
Avionics Team Software Developer

- Contributing to a Next.js/TypeScript flight telemetry dashboard integrating serial board connectivity, Axios APIs, Server-Sent Events, and real-time sensor monitoring.
- Building features for a React/Vite public website, including client-side routing, reusable navigation components, responsive layouts, and typed JSON-driven project and member pages.

Full-Stack E-Commerce Platform for LKConnections – Next.js, TypeScript, MongoDB 07/2026 – Present

- Building a responsive, full-stack e-commerce platform for a laptop retailer using Next.js, TypeScript, Tailwind CSS, and MongoDB.
- Applying audience persuasion and effective web design principles to develop a user-friendly e-commerce website, supported by API routes and MongoDB data models for laptop, user, and order data

Spain Beach Cleanup Robot, EPICS @ ASU – Python, ROS2 01/2026 – Present
Electrical Team Design Lead

- Engineering the motor control system for an autonomous beach-cleanup robot, translating drive commands into ESC/motor signals via ROS2 nodes on a Raspberry Pi.
- Developing GPS-based coverage path planning using ROS2's Nav2 stack to enable fully autonomous, systematic navigation, supporting cleanup efforts along Barcelona's beach areas

Project Spyn, Class Project 08/2024 – 12/2024

- Developed and implemented a MATLAB program to control a simulated vehicle, applying engineering concepts and coding skills to optimize performance within the application.
- Coordinated and tracked project progress using Microsoft Excel, monitoring teammate contributions, ensuring deadlines were met, and supporting effective collaboration across the team.

EXTRACURRICULAR EXPERIENCE

Software Developers Association, Tempe, AZ 08/2024 - Present

- Engaged in weekly meetings to expand knowledge and gain hands-on experience in Computer Science and Software Engineering topics.
