EDUCATION

B.S. Computer Systems Engineering Expected May 2028
Arizona State University, Tempe, AZ 4.00 GPA
Ira A. Fulton Schools of Engineering Dean's list

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Organization and Assembly Language Programming, Embedded Microprocessor System.

TECHNICAL SKILLS

Programming Languages: Python, C++, C, Java, TypeScript, Scheme, Prolog
Robotics / Embedded: ROS2, Nav2 (navigation stack), GPIO/PWM control, Linux (Ubuntu)
Full-Stack Development: React, Next.js, HTML, CSS, Tailwind CSS, MongoDB

RELEVANT PROJECTS

Sun Devil Rocketry: Website & Flight Software GUI – Next.js. React, Vite, TypeScript September 2026 – Present
Avionics Team Software Developer

- Contributing to a Next.js/TypeScript flight telemetry dashboard integrating serial board connectivity, Axios APIs, Server-Sent Events, and real-time sensor monitoring.
- Building features for a React/Vite public website, including client-side routing, reusable navigation components, and typed JSON-driven project and member pages.
- Improved responsiveness across the flight dashboard and public website, adapting layouts for mobile, tablet, and desktop screens using flexbox and grid.

Full-Stack E-Commerce Platform for LKConnections – Next.js, TypeScript, MongoDB July 2026 – Present

- Building a full-stack laptop retail platform for LKConnections, with listing, user, and order flows backed by Next.js API routes and typed Mongoose data models
- Designed a responsive, conversion-focused storefront with Tailwind CSS, using clear product layouts to make browsing and purchasing easier
- Integrated Cloudinary for image uploads and optimized delivery through URL transformations, and built an interactive WebGL image gallery (OGL) to showcase laptop listings

Spain Beach Cleanup Robot, EPICS @ ASU – Python, ROS2 January 2026 – Present
Electrical Team Design Lead

- Engineering the motor control system for an autonomous beach-cleanup robot, translating drive commands into ESC/motor signals via ROS2 nodes on a Raspberry Pi.
- Developing GPS-based coverage path planning using ROS2's Nav2 stack to enable fully autonomous, systematic navigation, supporting cleanup efforts along Barcelona's beach areas
- Collaborating with professors from the Polytechnic University of Catalonia (UPC) in Barcelona, Spain, to integrate academic research and international engineering expertise into the project.

Project Spyn, Class Project August 2024 – December 2024

- Developed and implemented a MATLAB program to control a simulated vehicle, applying engineering concepts and coding skills to optimize performance within the application.
- Coordinated and tracked project progress using Microsoft Excel, monitoring teammate contributions, ensuring deadlines were met, and supporting effective collaboration across the team.

WORK EXPERIENCE

Arizona State University, Tempe, AZ: Community Assistant at Tooker House August 2025 - Present

- Fostered student engagement by building relationships with 60+ residents, facilitating community events, and promoting the Sun Devil Community of Care to create a supportive and inclusive residential environment.
- Ensured safety and crisis response by serving in after-hours duty rotations, addressing student emergencies, and collaborating with Residential Life professional staff to maintain security and wellbeing in the community.
